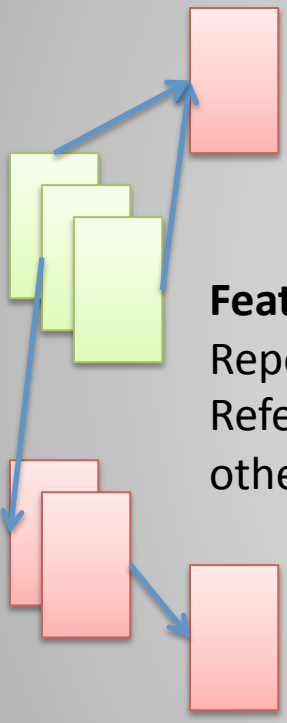
Draft

Clustering Metadata for improved Querying

Patrick Trinkle, UMBC
tri1@umbc.edu

Input
Set of documents

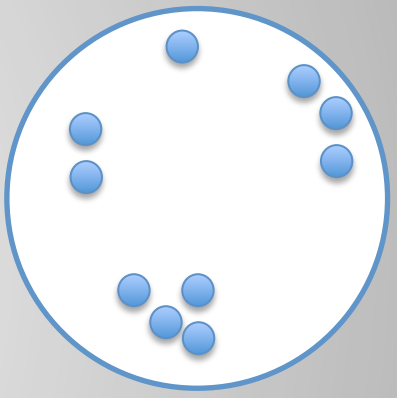


Features:
Reports
Reference
other docs

Process

1. Extract Metadata
2. Build vectors with references.
3. Cluster* documents by features

User Interface



Graph is 2-dimensional, people can interact in up to three Euclidian dimensions.

Previous Work
Scatter/Gather
Metadata Extraction

*Clustering algorithm can be chosen based on experimental performance

Future Work
Build system
Determine effectiveness with different data sets
